

**The coursework for ACSE-2 consists of two parts**

- Assignment 1 – potential flow
- Assignment 2 – wave propagation

You are asked to submit these two separately, as they will be marked separately. Each part is marked out of 100 points.

**For assignment 1**, please submit both your workings and code. This can be either in a Jupyter notebook, or a text/pdf file plus python code. Whichever format you choose, make sure you clearly illustrate your methods, the analytical derivations as well as figures that illustrate the results.

You can **submit your work for assignment 1** to the Github class room link: <https://classroom.github.com/a/DPHfVZYu>
